

# SHAHAM HIJAB

79-J Wapda City, Faisalabad | 0333-9918969 | [shahamhijab@proton.me](mailto:shahamhijab@proton.me) | [GitHub](#)

## PROFESSIONAL SUMMARY

AI Algorithm Engineer and recent science graduate with hands-on experience in machine learning, computer vision, and deep learning model training and deployment using Python and TensorFlow. Developed end-to-end ASL recognition systems and production-grade web applications, collaborating across agile teams. Demonstrated leadership through international HR roles and core development work at AIESEC, seeking to apply AI expertise to scientific research and multimodal modeling.

## EDUCATION

|                                                                                                                                   |                                         |
|-----------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>Angels International College</b><br><i>Matriculation (Pre-Medical)</i>                                                         | <b>2017 - 2019</b>                      |
| <b>Punjab College For Women</b><br><i>F.Sc (Pre-Medical)</i>                                                                      | <b>2019 - 2021</b>                      |
| <b>National Textile University, Faisalabad</b><br><i>Bachelor of Science, Artificial Intelligence</i>                             | <b>2022 - 2026</b><br><i>Faisalabad</i> |
| • <b>Coursework:</b> Machine Learning, Computer Vision, Data Structures, Database Systems, Embedded Systems, Software Engineering |                                         |

## TECHNICAL SKILLS

- **Languages:** Python, C++, C#, SQL, JavaScript, Assembly, Bash (Basic)
- **Frameworks:** React.js, Node.js, Express.js, MongoDB (MERN Stack), PyTorch
- **Tools & Platforms:** Arduino IDE, Firebase, Thingspeak, Kali Linux, Parrot OS, Git, GitHub, Vercel
- **AI / ML:** Computer Vision, Real-Time Object Detection, Model Training, Model Deployment, TensorFlow Lite, Deep Learning, Image Processing, Data Preprocessing, AI Agent Development, Prompt Engineering, Transformer, Large Language Models (LLM)
- **Databases:** SQL Server, MongoDB

## PROFESSIONAL EXPERIENCE

|                                                                                                                         |                           |
|-------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>Netixsol</b><br><i>MERN Stack Intern</i>                                                                             | <b>Jun 2025 - Present</b> |
| • Built and maintained full-stack web features with MongoDB, Express.js, React.js, Node.js, and Git for version control |                           |
| • Collaborated with cross-functional teams to design responsive, production-ready UI components in React.js             |                           |
| • Participated in Agile development cycles, leading sprint planning, code reviews, and daily standups                   |                           |
| • Leveraged Python scripting to automate build and deployment workflows                                                 |                           |
| <b>AIESEC</b><br><i>Team Leader – Human Resources</i>                                                                   | <b>2024 - 2025</b>        |
| • Led HR operations for a high-performing team, managing recruitment, onboarding, and talent development                |                           |
| • Completed 3 international HR roles, demonstrating cross-cultural communication and adaptability                       |                           |
| • Contributed to the development of PlanIt, AIESEC's internal task management tool, using JavaScript and SQL Server     |                           |

## PROJECTS

|                                                                                                                                                                                                      |                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>PlanIt – Task Tracker for AIESEC</b> <a href="https://planit-aiesec.vercel.app/">https://planit-aiesec.vercel.app/</a>                                                                            | <b>2024 - 2025</b> |
| <b>AIESEC</b>                                                                                                                                                                                        |                    |
| • Built and deployed a full-stack task tracking web application currently in active production use by AIESEC members                                                                                 |                    |
| • Implemented real-time task management, user authentication, and role-based access control                                                                                                          |                    |
| • Live at: <a href="https://planit-aiesec.vercel.app/">https://planit-aiesec.vercel.app/</a>                                                                                                         |                    |
| <b>ASL 3-Letter Detector</b>                                                                                                                                                                         | <b>2024</b>        |
| • Developed a real-time American Sign Language (ASL) letter recognition system using Python, OpenCV, and TensorFlow Lite, integrating deep learning model training and optimized inference pipelines |                    |
| • Trained and fine-tuned a convolutional neural network in PyTorch, achieving robust detection of hand-signed alphabets under varying lighting conditions                                            |                    |
| <b>Automated Solar Panel Cleaning System</b>                                                                                                                                                         | <b>2024</b>        |
| • Engineered an IoT-based automated cleaning system for solar panels with remote monitoring via Firebase and ThingSpeak                                                                              |                    |
| • Integrated hardware control modules with cloud data pipelines for real-time operational tracking                                                                                                   |                    |
| <b>TalentTrail – Internship &amp; Job Finder Platform</b>                                                                                                                                            | <b>2024</b>        |
| • Developed a responsive web platform enabling users to search and apply for internships and jobs                                                                                                    |                    |
| • Built intuitive filtering and search UI with a scalable MongoDB backend                                                                                                                            |                    |

### **Fingerprint-Based Smart Locker**

**2023**

- Designed a biometric authentication system for secure locker access using fingerprint recognition
- Optimized for low-power operation and reliable performance in small-scale security scenarios

### **Clinic Database Management System**

**2023**

- Built a desktop application for patient and appointment management with structured SQL database design
- Implemented CRUD operations, search functionality, and appointment scheduling workflows

### **AI-Powered Surveillance Robot**

**2025 - Present**

- Designed an AI-powered surveillance robot for real-time object detection and autonomous monitoring
- Integrated computer vision models with ESP32 hardware for intelligent threat identification and tracking
- Developed IoT-based communication and notification features for remote surveillance and instant alerts

### **Outreach & Follow-Up Automation System**

**2026**

- Built an autonomous outreach platform that automates lead engagement, follow-ups, and response management
- Integrated AI models for personalized email generation and adaptive communication workflows
- Automated CRM updates, lead tracking, and notification processes through n8n orchestration and API integrations
