PROFILE SUMMARY

Seeking to apply my skills in AI and machine learning to develop impactful, data-driven solutions in a dynamic tech environment.

EDUCATION

- 2022 - Present
NATIONAL TEXTILE UNIVERSITY
- Bachelors in Artificial Intelligence

ACHIEVEMENTS

- 2024 - 2025
AIESEC
- Team Leader HR
 - 3 International Roles HR
 - Part of coding team for its management tool: PlanIt
- Summer 2025
NETIXSOL
- MERN Stack Intern

LANGUAGES

- C++, C#
- Python
- SQL Server
- Assembly Language
- Bash Language (Basic)
- Kali Linux/Parrot OS
- MERN Stack

SOFT SKILLS

- Project Management Skills
- Leadership Skills
- Communication Skills
- Team Management Skills
- Punctuality

PROJECTS

ASL 3 Letters Detector

Python

- Built a real-time ASL letter recognition system in Python that detects and displays hand-signed alphabets using computer vision.

Automated Solar Panel Cleaning System

ESP32-S3, Python, Arduino IDE, Firebase, Thingspeak

- Developed an automated solar panel cleaning system using ESP32-S3, Python, and Arduino IDE with integrated hardware control.

Clinic Database System

C# and SQL

- Designed a clinic database management system using C# and SQL for efficient patient and appointment tracking.

Planit - Task Tracker for AIESEC

HTML, CSS, JS, React, Mongo DB

- Built and deployed 'Planit', a task tracking web app for AIESEC, using React, MongoDB, and JavaScript, currently in active use (It can be accessed here: <https://planit-aiesec.vercel.app/>).

TalentTrail - Internships and Jobs Finder

HTML, CSS, JS, React, Mongo DB

- Developed 'TalentTrail', a web platform that helps users find jobs, and internships through an intuitive and responsive interface.

Fingerprint-Based Smart Locker

Arduino, C++, Fingerprint Sensor Module, Servo Motor

- Built a secure smart locker system that unlocks using biometric fingerprint authentication for low-power operation and reliable access control for personal or small-scale security needs.
